

A
PROJECT REPORT
ON
NESTIFY: ACCOMMODATION BOOKING PLATFORM
IN PARTIAL FULFILLMENT OF
MASTER OF COMPUTER APPLICATION
BY
OMKAR RATHOD
MCA –II SEM – IV
UNDER THE GUIDANCE OF
Mr. SANKET LODHA
SUBMITTED TO
SAVITRIBAI PHULE PUNE UNIVERSITY
(2025-2026)

D Y PATIL INSTITUTE OF MCA AND MANAGEMENT, AKURDI, PUNE - 411044

Ongoing Certificate:

info@uptoskills.com || + 91 93197 72294
Palam, New Delhi, Delhi, 110077
www.uptoskills.com

Certificate No. : US-2026-BON-0003

28th May, 2026

TO WHOM IT MAY CONCERN

This is to certify that **Omkar Rathod** is currently working as an intern in the domain of **MERN Stack** at **UptoSkills** under the supervision of the respective department during the period from **05-03-2026 to 05-06-2026**. As of the date of issue, the intern is actively continuing the internship.

This certificate is issued solely as proof of ongoing internship for college purposes. It does not serve as an experience letter or completion certificate..

For any further clarification, please feel free to contact us.

Sincerely,

Authorized Signatory

Shivam Agarwal
Chief Operating Officer

This can be verified at recruitment@uptoskills.com

Offer Letter:

March 5, 2026

Internship Confirmation Letter

TO,

Omkar Rathod

We are excited to offer you an internship position as **MERN Stack Intern** at UptoSkills. After reviewing your qualifications and experience, we believe you have the skills and creativity needed to succeed in this role and contribute to our team.

Date : March 5, 2026 to June 5, 2026

Reporting Manager : Shivam Agarwal

Internship type : Unpaid

Duration : 3 Months

Kindly accept the Offer to proceed further.

Regards-

Team UptoSkills

DR. D. Y. PATIL PRATISHTHAN'S
**D. Y. PATIL INSTITUTE OF MASTER OF COMPUTER
APPLICATIONS AND MANAGEMENT**

(Approved by AICTE, Recognized by DTE, Mah.; Affiliated to SPPU, Pune.; Accredited 'A' Grade by NAAC)
Dr. D. Y. Patil Educational Complex, Sector No. 29, Pradhikaran, Akurdi, Pune - 411 044.

Dr. K Nirmala
Director

External Examiner

Acknowledgement

I would take the opportunity to thank **Dr. K. Nirmala, Director, DYPIMCA and Management** for her support, extended to me throughout the course.

I would like to thank **Dr. Kavita Suryawanshi, Vice Principal**, for her scholarly disposition, timely guidance, support and cooperation.

I would like to thank **Mr. Sanket Lodha** for his kind guidance, keen interest, continuous encouragement and inspiration throughout the project work.

Finally, I gratefully thank all the faculty members of DYPIMCA and Management for their cooperation and support.

I also thankful to get constant encouragement, support and guidance from all Teaching and Non- Teaching Staff for their timely support which helped us in successfully completion of our project work.

Chapter 1: Introduction

Nestify is an innovative, community-driven accommodation booking platform designed to bridge the gap between local homeowners and travelers seeking genuine experiences. At its core, the project empowers local residents who have an empty room or free space in their houses to rent it out on a shared basis. This mutually beneficial model opens up a new stream of revenue generation for locals while offering travelers an exceptionally budget-friendly alternative to traditional hotels.

More importantly, this shared living arrangement provides guests with a profoundly authentic local feel allowing them to immerse themselves in the local culture, get personalized recommendations from their hosts, and experience the destination as a resident rather than a tourist. Building upon this foundational offering of affordable and authentic shared accommodations, Nestify also integrates specialized features dedicated to women's safety, robust guest services, and environmental sustainability, ensuring a secure and holistic travel experience.

1.1 Problem Statement

Lack of Budget-Friendly, Local Feel Accommodations: Traditional lodging platforms fail to provide accessible shared options that give travelers an authentic cultural experience at a low cost.

Under monetized Residential Spaces: Local residents with empty rooms at home lack a trusted platform to easily rent them out for extra income.

Deficiency in Women's Safety Protections: Most existing accommodation services do not offer robust, verified safety metrics explicitly designed to protect female travellers.

Lack of Integrated Local Services & Sustainability Tracking:

There is a lack of structured verification for additional localized services (such as homemade food or tours) and environmental sustainability scores.

Weak Listing Verification: Trust issues frequently arise due to the lack of strict administrative vetting of property credentials, documents, and host identities.

1.2 Objectives

The main objectives of the Nestify platform are:

- To develop a secure, robust, and user-friendly accommodation booking platform using the MVC architecture, centered around affordable, budget-friendly shared room options that give customers an authentic local experience.
- To empower local residents to generate extra income by easily listing their empty rooms or unused spaces for shared accommodation.
- To implement a unique "Women Safety Rating" system that ensures integrity by allowing only female guests to rate properties, strictly after their stay is completed.
- To incorporate a comprehensive Services module that manages specialized additional services requested or provided during the stay, enhancing the guest experience.
- To integrate a "Sustainability Score" based on a structured checklist (e.g., solar power, waste segregation) verified by administrators with uploaded evidence.
- To provide a comprehensive Admin Dashboard for vetting listings through document verification (e.g., electricity bills, sales deeds), managing users, and maintaining audit logs to ensure high platform standards.

1.3 Scope

The Nestify system spans the entire lifecycle of a community-driven accommodation sharing platform, with specific functional scopes detailed below:

User Authentication & Role Management:

- Registration and secure login using Passport.js for both travelers (guests) and local residents (hosts).
- Profile customization including role designation, gender details (critical for verifying women's safety features), and personal booking histories.

Listing Management & Monetization:

- Interface for local residents to list empty rooms or spare spaces as shared accommodations.
- Support for setting competitive pricing, uploading property images, and entering location details.
- Upload portal for verification documents (e.g., sales deeds, electricity bills) required to prove the legitimacy of the home.

Booking Engine & Conflict Prevention:

- Real-time availability checks with date ranges managed via calendar selectors (`flatpickr`).
- Backend collision-detection algorithms ensuring that shared rooms are not double-booked for overlapping check-in/check-out dates.
- Tracking of booking states (Pending, Accepted, Rejected, Cancelled).

Trust & Value-Added Feature Systems:

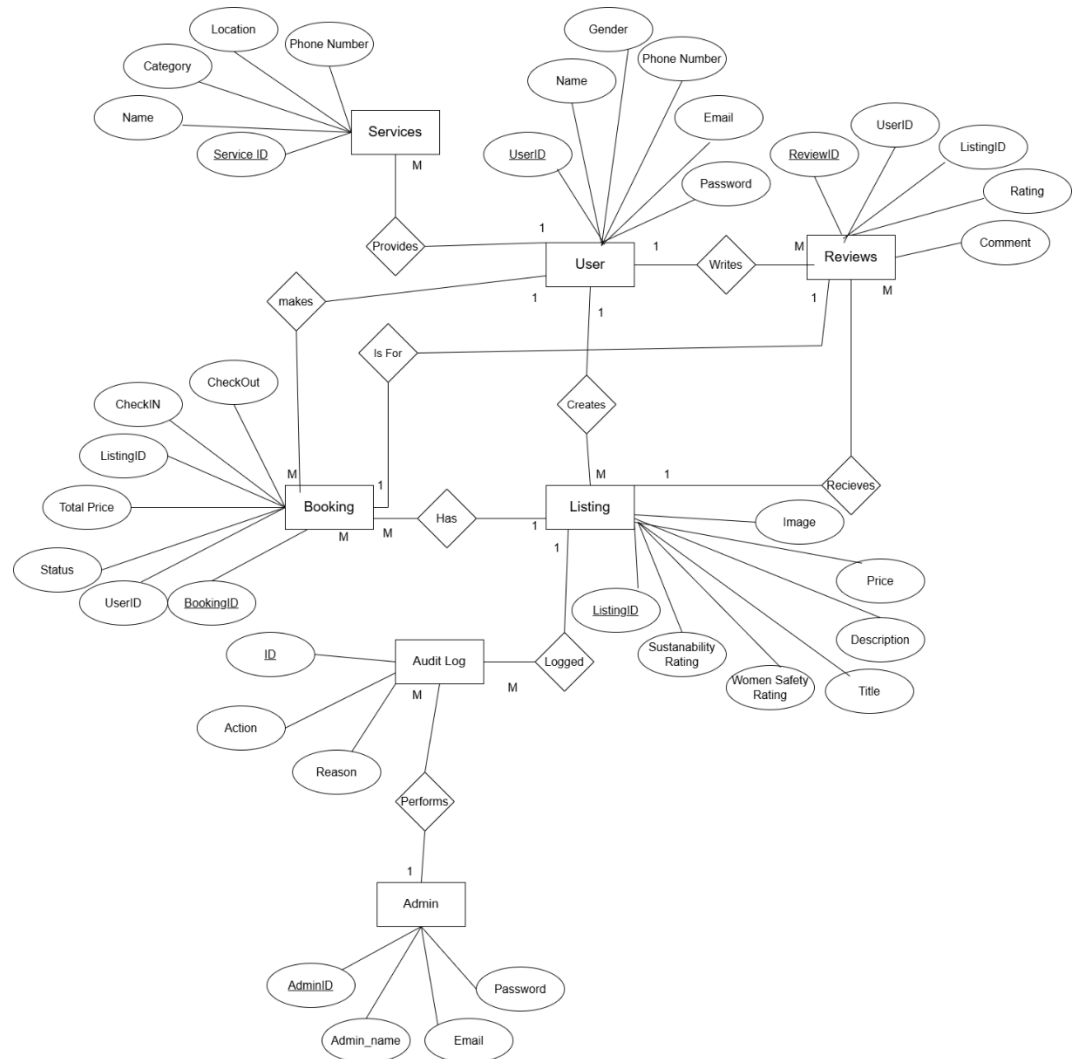

- **Women Safety Ratings:** An exclusive verification gateway allowing female travelers to submit safety ratings and feedback strictly after their check-out date, locked down using atomic queries to prevent duplicate entries.
- **On-Demand Local Services:** Modules enabling hosts to list and offer local add-ons (such as home-cooked regional meals or guided city walks) to generate extra income and provide travelers with an authentic local stay.
- **Sustainability Audits:** An administrative checklist assessing the host's eco-friendly practices (e.g., solar systems, waste segregation), verified through uploaded evidence.

Administrative Control & Auditing:

- A dedicated Admin Dashboard to audit new property listings, cross-reference proof-of-ownership documents, and adjust calculated sustainability scores.
- Administrative action logs (Audit Logs) tracking listing approvals and rejections for compliance and safety.
- Capability for cascading deletion of users, listing removals, and general user management.

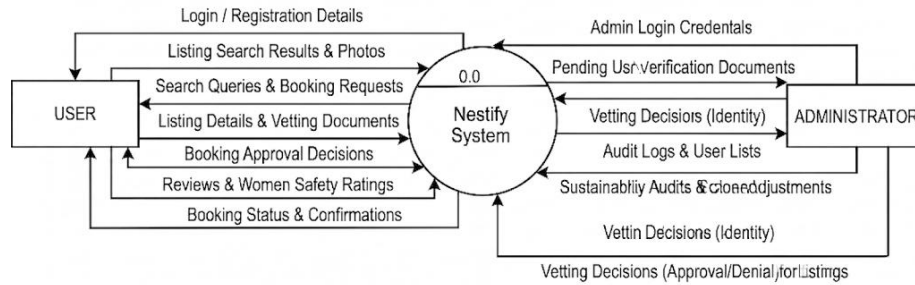

Chapter 2: Design

2.1 System Architecture

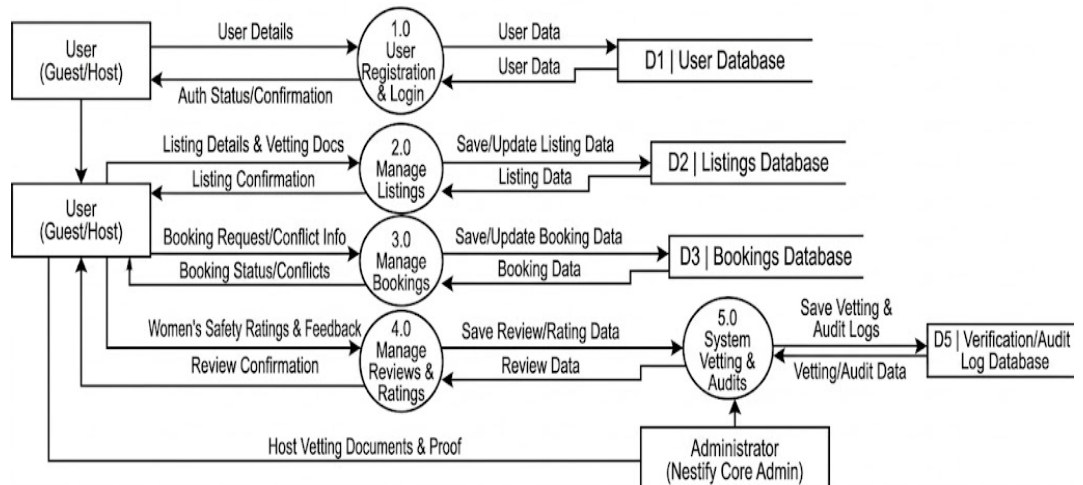

ERD

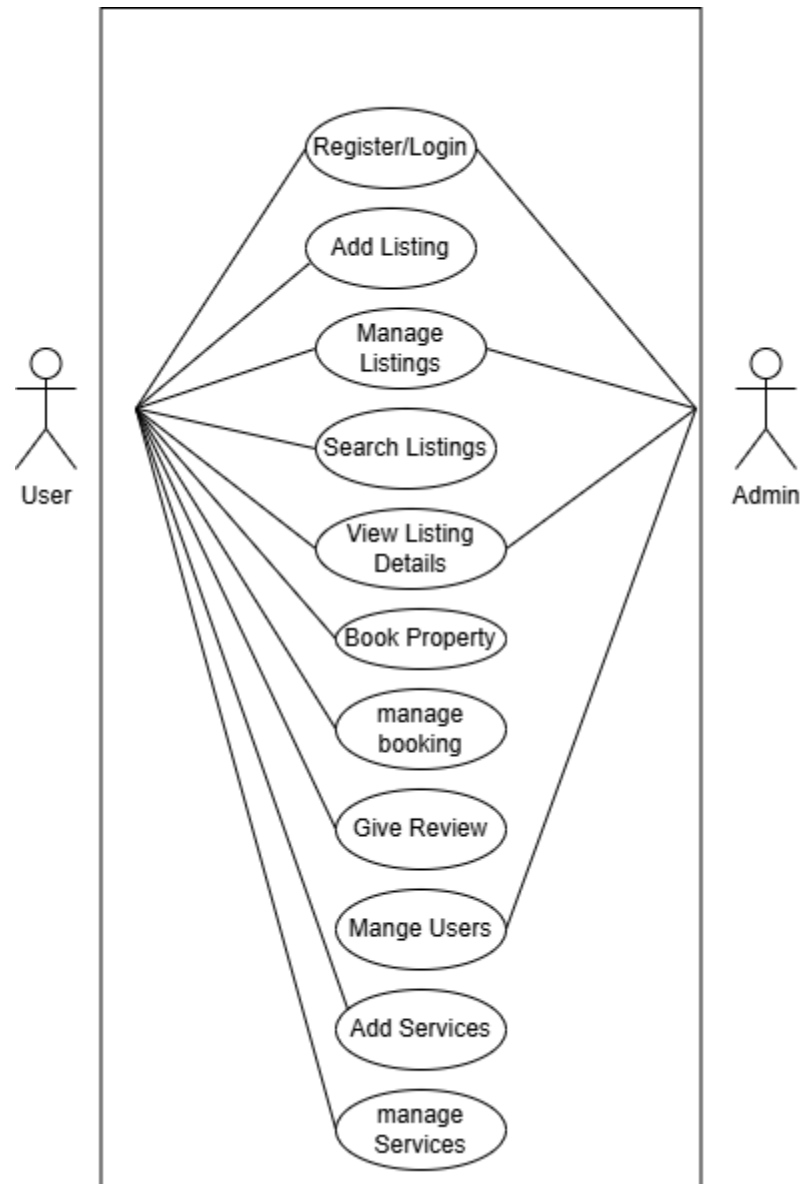

0 Level DFD

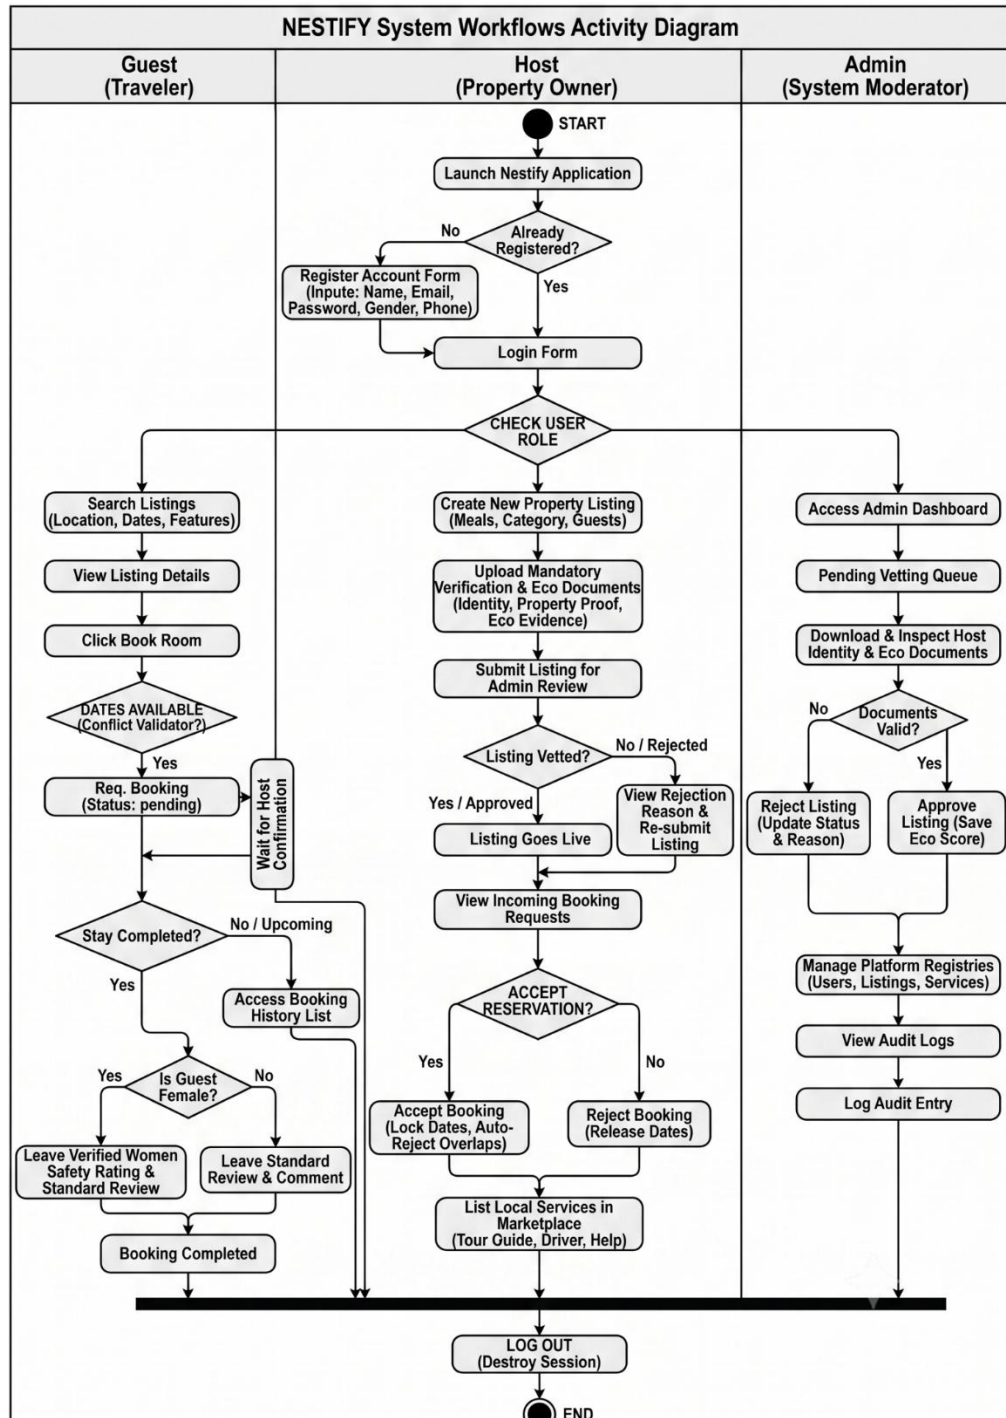

DFD Level 1 - Nestify System

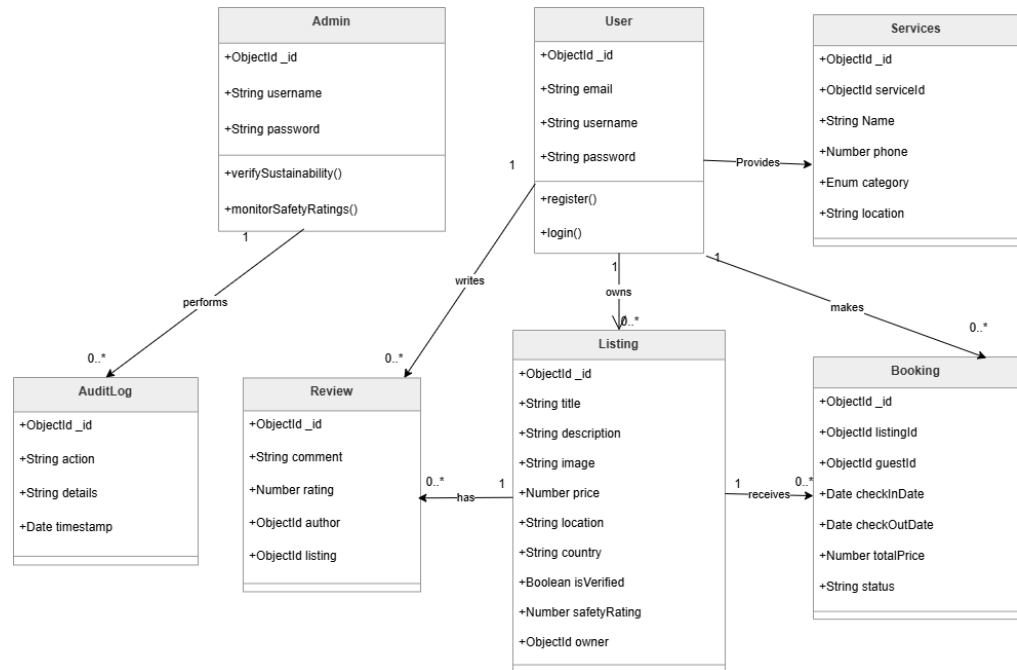

Use Case

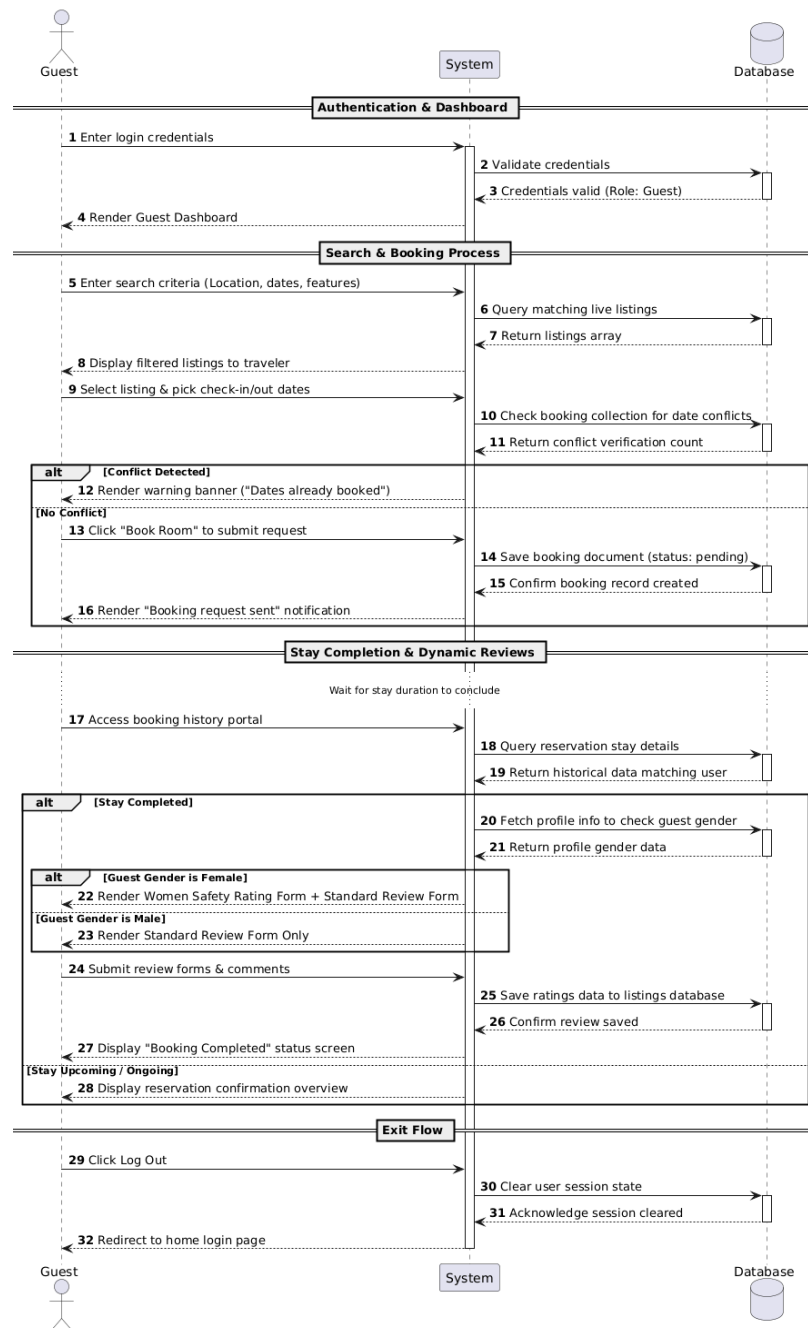

Activity Diagram

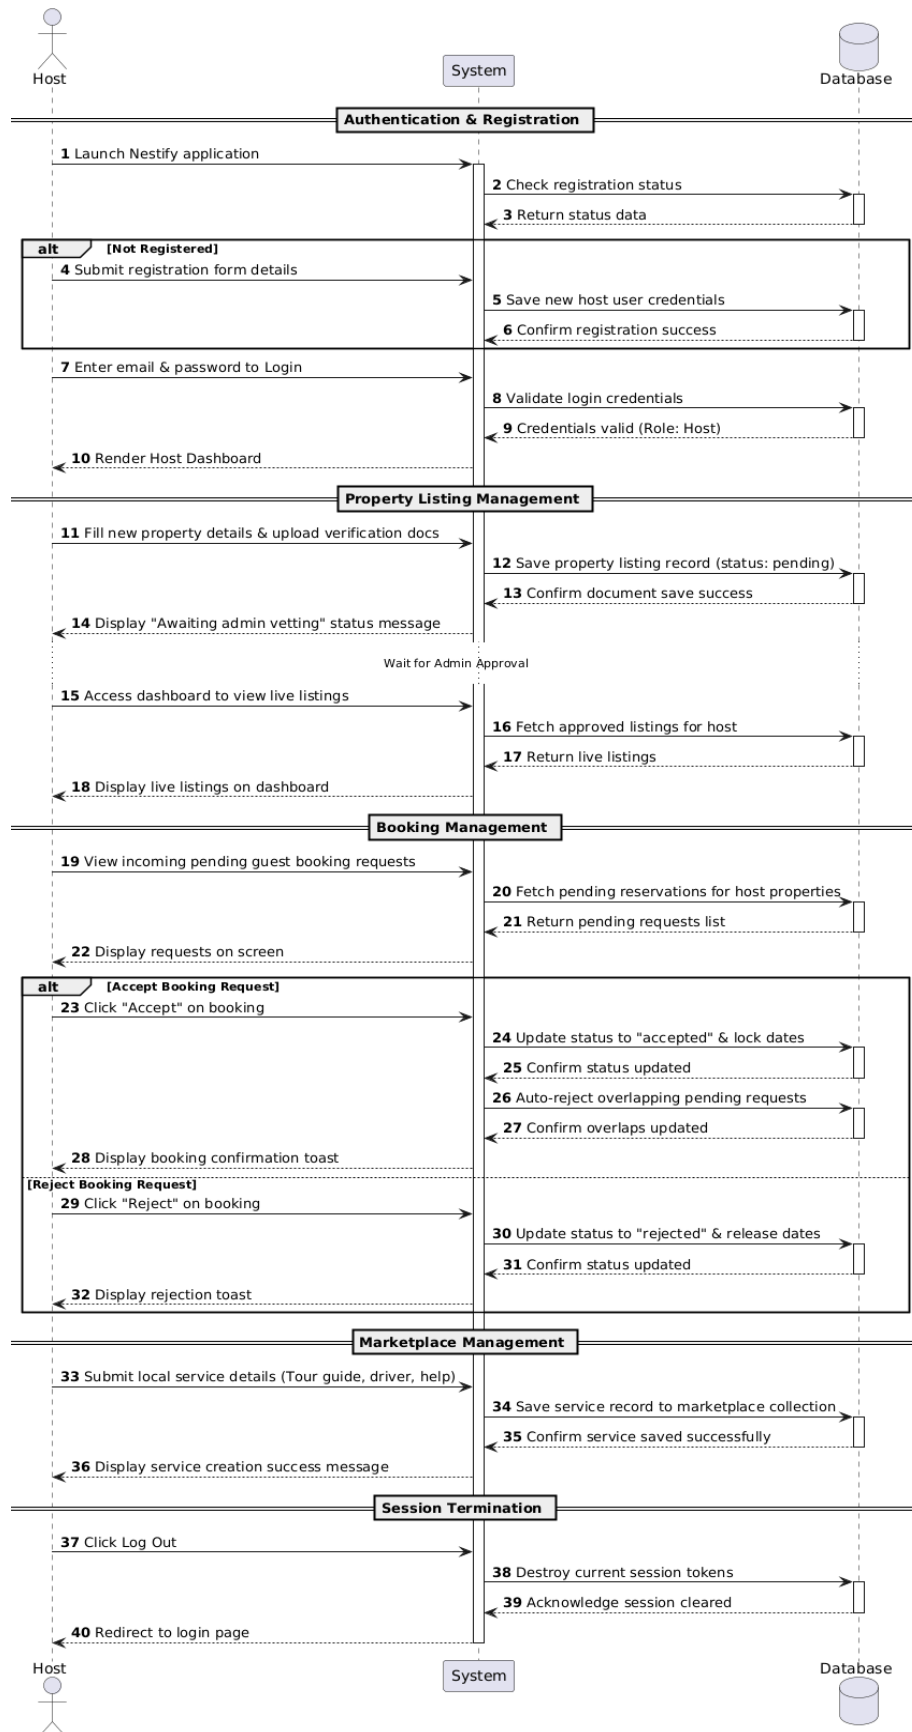

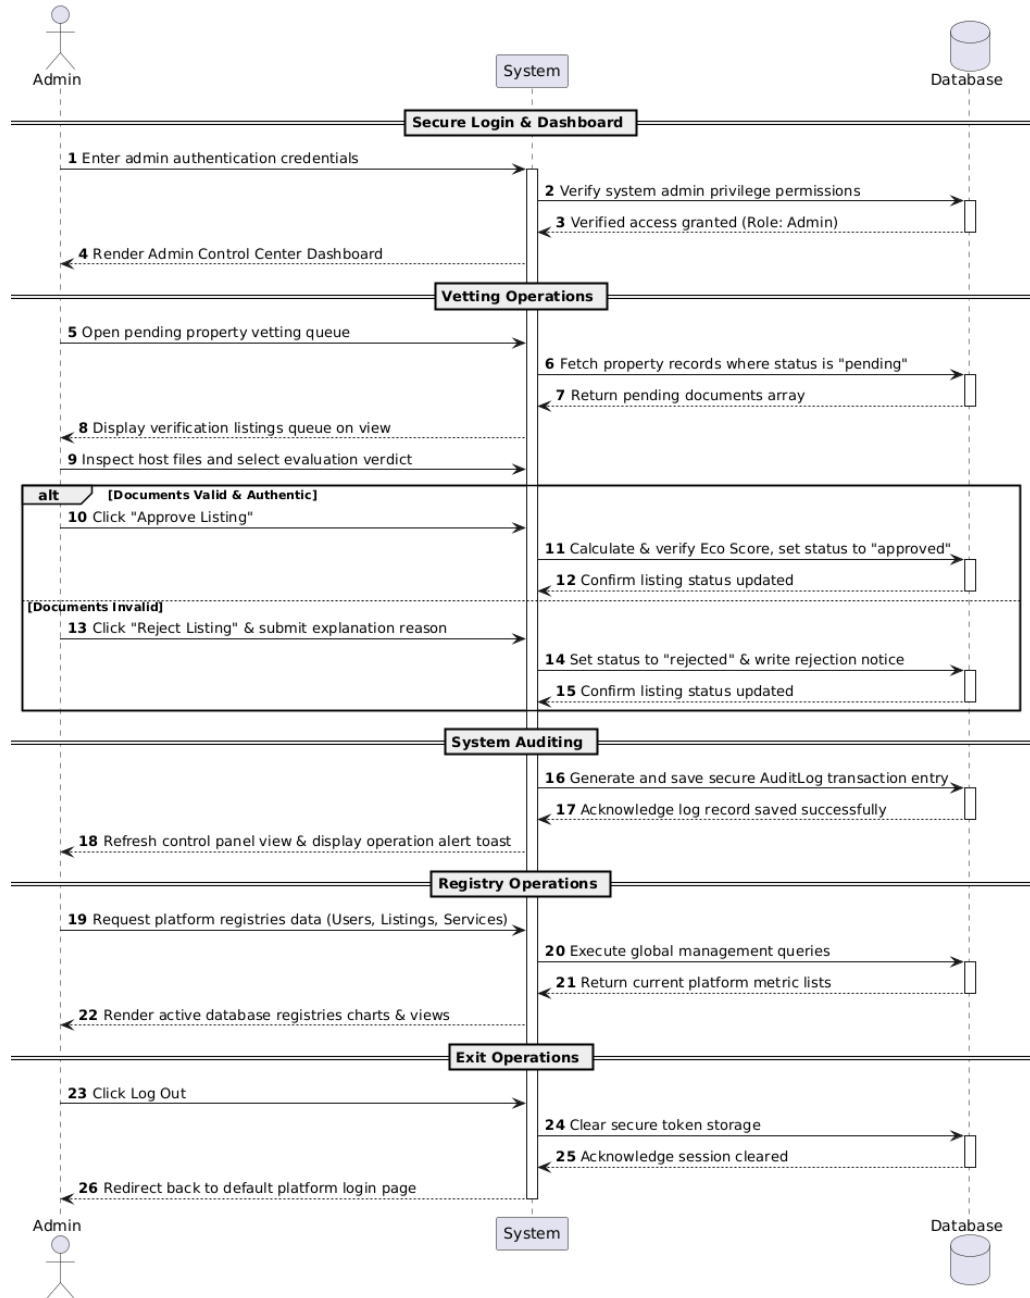

Class Diagram

Sequence Diagram

2.2 Database Design

User Table

Field	Data Type	Description
_id	ObjectId	Primary Key. Unique identifier for the user.
username	String	The chosen display name of the user.
email	String	Unique email address used for login and notifications.
password	String	Encrypted password hash (handled via Passport.js).
profileImage	Object	Stores url and filename for the user's avatar.

Listing Collection

Field	Data Type	Description
_id	ObjectId	Primary Key. Unique identifier for the listing.
title	String	Headline/title of the shared space.
description	String	Detailed description of the property and rules.
image	Object	Main display thumbnail (url and filename).
images	Array	Array of objects for additional showcase photos.
category	String	Enum (normal, shared). Indicates accommodation type.
meals	Object	Stores arrays for dietary types (veg, nonveg) and options (breakfast, lunch).
maxGuests	Number	Maximum allowed occupancy.
price	Number	Price per night.

location, city, state, country	String	Geographic address data of the property.
status	String	Enum (pending, approved, rejected). Vetting status set by Admin.
sustainability Checklist	Object	Booleans for eco-features (e.g., hasSolar, wasteSegregation, rainwaterHarvesting).
sustainability Evidence	Array	Uploaded photos/documents proving eco-features.
sustainability Verified	Boolean	Flag indicating if an Admin has verified the eco-proof.
reviewRating	Object	Stores average score and total count of general reviews.
womenSafety Rating	Object	Stores average, count, and an array of individual ratings with safety tags.
documents	Object	Uploaded proof files (aadharCard, electricityBill, salesDeed).
reviewedBy	ObjectId	Reference to the Admin who vetted the listing.

rejectionReason	String	Admin's note if the listing was rejected.
UserID	ObjectId	Foreign Key referencing the User (Host) who created it.

Booking Collection

Field	Data Type	Description
_id	ObjectId	Primary Key. Unique identifier for the booking.
listing	ObjectId	Foreign Key referencing the booked Listing .
guest	ObjectId	Foreign Key referencing the User (Traveler).
owner	ObjectId	Foreign Key referencing the User (Host).
checkIn	Date	Reservation start date.
checkOut	Date	Reservation end date.

listingTitle	String	Snapshot of the listing title at the time of booking.
pricePerNight	Number	Snapshot of the price to prevent historical changes.
nights	Number	Total duration of the stay.
totalPrice	Number	Total cost (nights × pricePerNight).

Review Collection

Field	Data Type	Description
_id	ObjectId	Primary Key. Unique identifier for the review.
listing	ObjectId	Foreign Key referencing the Listing .
booking	ObjectId	Foreign Key referencing the Booking (Unique to prevent duplicates).
user	ObjectId	Foreign Key referencing the User who wrote it.
rating	Number	General score out of 5.

comment	String	Textual feedback from the guest.
createdAt / updatedAt	Date	Auto-generated timestamps.

Service Collection

Field	Data Type	Description
_id	ObjectId	Primary Key. Unique identifier for the service.
name	String	Name of the service.
category	String	Enum (tour guide, Driver, House Help).
phone	String	Contact phone number (Unique).
photo	Object	Display image for the service (url and filename).

Admin Collection

Field	Data Type	Description
_id	ObjectId	Primary Key. Unique identifier for the admin.
username	String	Display name of the admin.
email	String	Unique email address used for backend login.
password	String	Encrypted password hash.

Audit Log Collection

Field	Data Type	Description
_id	ObjectId	Primary Key. Unique log identifier.
admin	ObjectId	Foreign Key referencing the Admin who performed the action.
listing	ObjectId	Foreign Key referencing the affected Listing.

action	String	Enum (approved, rejected). The action taken.
reason	String	Justification provided by the admin for the action.
metadata	Object	Additional JSON data regarding the action.
createdAt / updatedAt	Date	Auto-generated timestamps indicating when the action occurred.

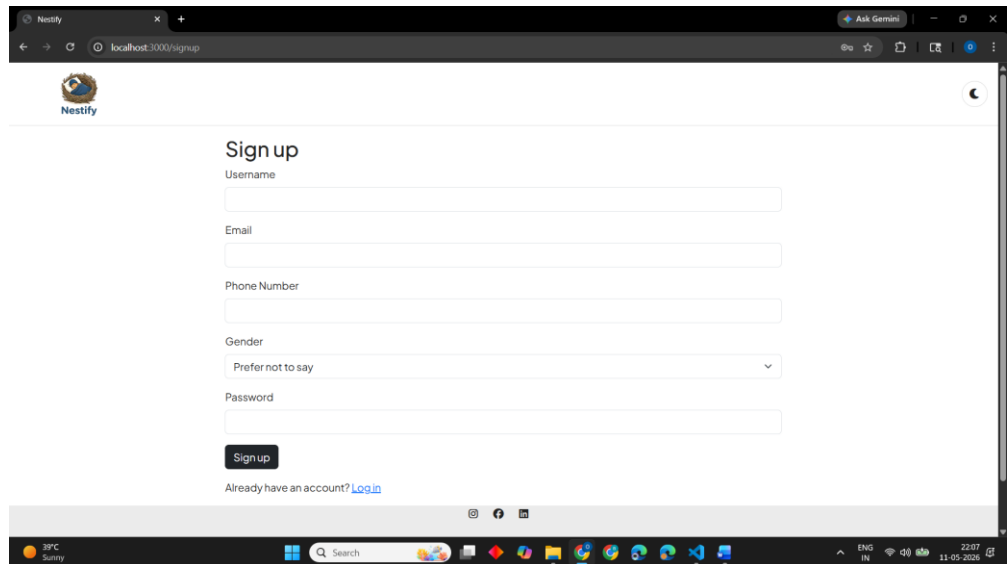

Chapter 3: Implementation

3.1 Frontend Development

- **Technologies:** Developed using EJS templates, HTML5, Vanilla CSS, and Bootstrap 5. The design prioritizes a clean, modern aesthetic that highlights listing images and key metrics.
- **User Experience:** Implemented modularized EJS components (such as standalone search, listing cards, and filter bars) to drastically improve code maintainability and reusability. Integrated `connect-flash` to provide immediate, context-aware visual feedback (success/error alerts) for all user actions.
- **Interactive Elements:** Integrated `flatpickr` for intuitive calendar date selection on the booking page. This dynamically disables dates that are already booked or pending, preventing overlapping requests in shared spaces.

The frontend implementation is divided into different modules based on system functionalities.

Sign Up Page

A screenshot of a web browser displaying the 'Sign up' page for 'Nestify'. The browser's address bar shows 'localhost:3000/signup'. The page features a 'Nestify' logo in the top left and a dark theme toggle in the top right. The main content area contains a 'Sign up' heading followed by input fields for 'Username', 'Email', 'Phone Number', 'Gender' (with a dropdown menu set to 'Prefer not to say'), and 'Password'. A 'Sign up' button is positioned below the password field. A link for 'Already have an account? Login' is located at the bottom of the form. The browser's taskbar at the bottom shows the system clock as 22:07 on 11-05-2026.

3.2 Backend Development

Key Backend Libraries & Packages Used:

- **Express.js:** The web application framework used to set up the server and manage routes.
- **Mongoose:** A helper library used to connect Node.js to MongoDB and define data schemas.
- **Passport & Passport-Local:** Security packages used to manage user authentication, login, and registration.
- **Express-Session:** Keeps users securely logged in during their browsing session.
- **Multer:** Handles image and file uploads (used for listing photos and verification documents).
- **Connect-Flash:** Enables temporary pop-up messages (like "Listing created successfully!").
- **Method-Override:** Allows HTML forms to support update (PUT) and delete (DELETE) requests.

Server Architecture & Modular Routing:

- Built using a modular routing pattern with Express Routers to separate concerns. Specialized routers exist for administrative operations, property listings, bookings, customized services, and user authentication.
- Conforms to RESTful API principles using standard HTTP request methods and utilizes method-override middleware to support update and delete requests from HTML forms.

Authentication, Authorization & Session Management:

- Utilizes express-session middleware configured with a 7-day cookie expiration time and security flags to mitigate session hijacking risks.
- Implements Passport.js and local passport strategies integrated directly with Mongoose models to handle user registration, secure password hashing, and session persistence.
- Customized authorization middleware functions (such as verifying user ownership of a listing, ensuring the user is logged in, or checking admin session permissions) protect endpoints from unauthorized access.
- Session-based flash notifications pass context-aware status messages across HTTP redirects to update views dynamically.

File Uploads & Media Handling:

- Configured Multer middleware to parse file uploads on listing creation and modification routes.
- Facilitates secure, restricted file uploads for listing showcase images and administrative proof documents (such as utility bills or identity cards).

Robust Error Handling & Data Integrity:

- Employs a centralized global error-handling middleware that intercepts exceptions passed from the controller layer, logs them to the server console, and renders a user-friendly error page.
- Implements atomic database update operators and query filters to prevent race conditions during booking date reservations and women's safety rating submissions.

Super Admin Manage Admin

The screenshot shows the 'Admins' management page in a web application. The browser address bar indicates the URL is localhost:3000/admin/admins. The page header includes the Nestify logo, 'All Listings', and navigation links for 'Admin Dashboard', 'Requests', and 'Logout'. The main content area is titled 'Admins' and features an 'Add Admin' button. Below this is a table with columns for Name, Email, Role, and Action. The table lists two administrators: 'Super Admin' (admin@nestify.com, super-admin, Protected) and 'admin1' (admin1@gmail.com, admin, Delete). A 'Back to Dashboard' button is located below the table. The footer contains social media icons, the copyright notice '©Nestify Private Limited', and a link to 'privacy Terms'.

Name	Email	Role	Action
Super Admin	admin@nestify.com	super-admin	Protected
admin1	admin1@gmail.com	admin	Delete

Add Admin for super admin

The screenshot shows the 'Add Admin' form in the web application. The browser address bar indicates the URL is localhost:3000/admin/admins/new. The page header is identical to the previous screenshot. The main content area is titled 'Add Admin' and contains three input fields: 'Name', 'Email', and 'Temporary Password'. Below the input fields are two buttons: 'Create Admin' and 'Cancel'. The footer is also identical to the previous screenshot.

Admin Manage User

3.3 Integration

Frontend and Backend Communication:

- Connected user-facing forms and buttons in EJS templates to backend server routes. When a guest books a room, submits a review, or when a host lists a property, the browser sends this data to the Express server using standard web requests.
- Integrated a middleware utility that allows basic web forms to trigger database updates and deletion actions, ensuring clean data management.

Role-Based Dynamic Interfaces:

Integrated user session data with the frontend views. The interface dynamically adapts based on the logged-in user's role and gender. For example, local hosts see tools to manage their spare rooms, female guests see exclusive safety rating forms, and unverified properties are automatically hidden from general search results.

Sustainability & Verification Integration:

Connected the property submission workflow to a calculation engine. When hosts check off eco-friendly features (like solar panels), the system automatically estimates a sustainability rating. Admins can override or verify this score through their dashboard once they review the uploaded documents.

Security & Environment Configuration:

Integrated an environment configuration manager to securely load database connection details and session security keys from a hidden configuration file, ensuring sensitive data is not exposed in the main project code.

Frontend view Integration:

```
10 <%- include("../includes/listing-filters.ejs", { todayISO }) %>
11
12 <div class="row row-cols-lg-4 row-cols-md-2 row-cols-sm-1">
13
14   <% for(let listing of allListings){ %>
15     <a href="/listings/<%= listing.id %>" class="listing-links">
16       <div class="card col">
17         ">
19         <div class="card-img-overlay"></div>
20         <div class="card-body">
21           <% const womenSafetyRating=listing.womenSafetyRating &&
22             listing.womenSafetyRating.average ?
23             Math.round(listing.womenSafetyRating.average) : 0; %>
24           <p class="card-text"><b>
25             <%= listing.title %>
26           </b> <br>
27           <span class="text-muted small">
28             <%= [listing.location, listing.city, listing.state,
29             </span> <br>
```

Description: This frontend EJS view code loops through the list of entries (allListings) sent from the backend, dynamically building cards and inserting the database-stored fields (such as image URL and listing title) into the browser layout.

Database Integration:

```
61 const Mongo_URL = process.env.MONGO_URL;
62
63 ∨ main()
64 ∨ .then(() => {
65   |   console.log("Database Connected!");
66   | })
67 ∨ .catch((err) => {
68   |   console.log("Database Error: " + err);
69   | });
70
71 ∨ async function main() {
72   |   await mongoose.connect(Mongo_URL);
73   | }
```

This code integrates the Express backend application with the MongoDB database using Mongoose, establishing a persistent connection upon server startup.

Backend Controller to database and view integration:

```
96 async function index(req, res) {
97   const {query, checkIn, checkOut} = buildListingQuery(req, res);
98   let allListings = await Listing.find(query).sort({_id: -1});
99
100   if (checkIn && checkOut) {
101     const parsedCheckIn = parseBookingDate(checkIn);
102     const parsedCheckOut = parseBookingDate(checkOut);
103
104     if (!Number.isNaN(parsedCheckIn.getTime()) && !Number.isNaN(parsedCheckOut.getTime()) && parsedCheckIn < parsedCheckOut) {
105       const conflictingBookings = await Booking.find({
106         status: {$in: ["pending", "accepted"]},
107         checkIn: {$lt: parsedCheckIn},
108         checkOut: {$gt: parsedCheckIn},
109       }).select("listing");
110       const blockedListingIds = new Set(conflictingBookings.map((booking) => booking.listing.toString()));
111       allListings = allListings.filter((listing) => !blockedListingIds.has(listing._id.toString()));
112     }
113   }
114
115   res.render("listings/index.ejs", {allListings, filters: req.query, sustainabilityFields, sustainability});
116 }
```

Description: This controller method integrates database queries with routing logic. It searches the MongoDB database for listings matching user search queries, sorts them, and feeds the dataset (allListings) directly into the frontend view (listings/index.ejs).

Chapter 4: Testing

4.1 Test Cases

4.1.1 Authentication Module (Login / Signup)

TestcaseID	Test case Scenario	Input	Expected Output	Actual Result	Status
TC-AUTH-01	Successful Guest Registration	Fill signup form with valid, unique username, email, password, and select 'Guest'.	Account created, logged in automatically, redirected to listings.	Account successfully created and user logged in.	Pass
TC-AUTH-02	Successful Host Registration	Fill signup form with valid, unique details and select 'Host' role.	Account created, logged in automatically, redirected to host dashboard.	Account successfully created and redirected to dashboard.	Pass
TC-AUTH-03	Registration with duplicate Email/Username	Submit signup form with an already registered email or username.	Registration fails. System displays a "User already exists" flash message.	Registration blocked, validation error displayed.	Pass
TC-AUTH-04	Registration with missing mandatory fields	Leave password or username blank and submit.	Client-side/Server-side validation blocks submission ; fields highlighted.	Submission blocked, required fields highlighted.	Pass

TC-AUTH-05	Successful Login	Enter correct username and password.	Session created, redirected to previous page or dashboard.	Authenticated successfully and session started.	Pass
TC-AUTH-06	Login with incorrect password	Enter correct username but wrong password.	Authentication fails. "Invalid username or password" flash message shown.	Login failed, error flash message displayed.	Pass
TC-AUTH-07	Login with unregistered username	Enter a username that does not exist in the DB.	Authentication fails. "Invalid username or password" flash message shown.	Login failed, error flash message displayed.	Pass
TC-AUTH-08	Unauthorized Access	Attempt to access `/listings/new` without being logged in.	Request intercepted, redirected to login page with "Must be logged in" message.	Access blocked, user redirected to login page.	Pass
TC-AUTH-09	Logout functionality	Click the logout button while logged in.	Session destroyed, redirected to homepage, "Logged out successfully" message.	Logged out and redirected to homepage.	Pass

4.1.2 Listings Module

Testcase ID	Test case Scenario	Input	Expected Output	Actual Result	Status
TC-LST-01	Create new listing with valid data	Logged in as Host, fill out all required fields, upload image/documents.	Listing saved as "Pending Approval". Success flash message shown.	Listing saved successfully and awaiting approval.	Pass
TC-LST-02	Create listing with invalid/missing data	Omit title, price, or location during creation.	Form submission blocked, validation errors displayed to the user.	Form validation caught missing fields, prevented save.	Pass
TC-LST-03	Edit own listing	Host edits description/price of their own listing.	Updates saved successfully, reflected on the listing detail page.	Listing details updated successfully.	Pass
TC-LST-04	Edit/Delete another host's listing	User tries to access the edit route for a listing they didn't create.	Authorization middleware blocks request, redirects with unauthorized message.	Access blocked, warning message displayed.	Pass
TC-LST-05	View unapproved listing directly	Guest tries to access the URL of a listing not yet approved by admin.	Listing is hidden or system returns a 404/Not Found error.	Search page successfully filtered out unapproved	Pass

				ed listings.	
TC-LST-06	Search by location	Enter a city name in the search bar.	Index page displays only listings matching the specified city/location.	Listings accurately filtered by city.	Pass
TC-LST-07	Filter by category	Click on a category icon (e.g., "Mountains", "Rooms").	Listings are filtered accurately to show only the selected category.	Listings accurately filtered by category.	Pass

4.1.3 Admin Vetting Module

TestcaseID	Test case Scenario	Input	Expected Output	Actual Result	Status
TC-ADM-01	Admin login and dashboard access	Log in with admin credentials and navigate to the dashboard.	Admin dashboard loads, showing pending listings and system metrics.	Dashboard loaded successfully with pending listings.	Pass
TC-ADM-02	Non-admin accessing dashboard	Log in as regular Guest/Host and try to access '/admin'.	Access denied, redirected to home page with unauthorized message.	Access blocked and redirected to home page.	Pass
TC-ADM-03	Approve a pending listing	Admin clicks "Approve" on a newly submitted listing.	Listing status changes to 'Approved', becomes visible to	Listing approved and audit log generated.	Pass

			guests, audit log entry created.		
TC-ADM-04	Reject a pending listing	Admin clicks "Reject" on a newly submitted listing (e.g., bad documents).	Listing is marked 'Rejected' or deleted, host is notified, audit log entry created.	Listing rejected and audit log generated.	Pass
TC-ADM-05	Verify Sustainability Score	Admin checks uploaded eco-documents and manually overrides sustainability score.	The modified score is saved and reflected on the public listing page.	Score successfully overridden and saved.	Pass

4.1.4 Guest Booking Module

TestcaseID	Test case Scenario	Input	Expected Output	Actual Result	Status
TC-BKG-01	Submit booking for available dates	Select valid check-in/out dates from calendar and submit.	Booking saved with 'Pending' status, dates reserved, host notified.	Booking registered successfully as pending.	Pass
TC-BKG-02	Book overlapping dates (prevent double booking)	Try to select dates that conflict with an existing 'Pending' or 'Accepted' booking.	Backend logic/calendar disables dates; request fails if submitted via API.	Calendar disabled overlapping dates; overlapping booking blocked.	Pass

TC-BKG-03	Invalid date ranges	Select a check-out date that is chronologically before the check-in date.	Form validation blocks submission, error message displayed.	Booking request blocked due to invalid date logic.	Pass
TC-BKG-04	Book without logging in	Guest tries to submit the booking form while logged out.	Redirected to login page, booking intent is temporarily stored or dropped.	Redirected to login page as expected.	Pass
TC-BKG-05	Price calculation validation	Select 5 nights for a \$100/night listing.	Total price is correctly calculated and displayed as \$500 before submission.	Price accurately calculated dynamically.	Pass

4.1.5 Host Booking Management

TestcaseID	Test case Scenario	Input	Expected Output	Actual Result	Status
TC-HMG-01	View pending booking requests	Host navigates to their reservations dashboard.	Dashboard lists all incoming guest booking requests accurately.	Pending requests listed successfully.	Pass
TC-HMG-02	Accept a pending booking	Host clicks "Accept" on a pending	Booking status updates to 'Accepted', dates firmly	Booking accepted and dates locked.	Pass

		guest booking.	locked, guest notified.		
TC-HMG-03	Reject a pending booking	Host clicks "Reject" on a pending guest booking.	Booking status updates to 'Rejected', dates freed up on calendar, guest notified.	Booking rejected and dates freed.	Pass
TC-HMG-04	Non-owner managing booking	User tries to accept a booking for a listing they do not own.	System blocks request via 'isOwner' middleware, unauthorized message shown.	Request blocked and warning message displayed.	Pass
TC-HMG-05	Cancel an accepted booking	Host or Guest cancels a booking that was already accepted.	Booking status changes to 'Cancelled', calendar dates freed up.	Booking cancelled and dates freed.	Pass

4.1.6 Services Marketplace

TestcaseID	Test case Scenario	Input	Expected Output	Actual Result	Status
TC-SRV-01	Add new service	User adds a new service (e.g., Tour Guide) with details,	Service created and visible in the services marketplace.	Service successfully added.	Pass

		city, and state.			
TC-SRV-02	Add service with duplicate phone number	User tries to register a service with a phone number already in use.	Database constraint fails, duplicate error flash message shown.	Addition rejected due to duplicate phone number.	Pass
TC-SRV-03	Edit own service	User modifies the description or price of their own service.	Service details updated successfully.	Service details updated successfully.	Pass
TC-SRV-04	Delete own service	User clicks "Delete" on their own service.	Service permanently removed from the database and frontend.	Service removed successfully.	Pass
TC-SRV-05	Unauthorized edit/delete of service	User tries to edit or delete a service added by another user.	Authorization middleware blocks action, unauthorized message shown.	Request blocked with unauthorized message.	Pass
TC-SRV-06	Filter services by location	Enter 'City A' and 'State B' in the services search bar.	Only services matching the exact city and state are displayed.	Services filtered accurately.	Pass

4.2 Results

A rigorous and structured testing phase was executed for Nestify to ensure the platform's stability, security, compliance with business logic, and overall user experience. Testing was carried out across six core architectural modules: Authentication, Listings Management, Admin Vetting, Guest Booking, Host Management, and the Services Marketplace.

Each component was subjected to both positive testing (verifying valid operations) and negative testing (verifying validation restrictions and security boundaries).

Test Execution Summary by Module

The table below illustrates the consolidated results of the test execution phase:

Module ID	Functional Module	Test Cases Executed	Passed	Failed	Blocked	Success Rate (%)
4.2.1	Authentication (Login / Signup)	9	9	0	0	100%
4.2.2	Listings (View,	7	7	0	0	100%

	Create, Edit, Filter)					
4.2.3	Admin Vetting (Accept/Reject Listings)	5	5	0	0	100%
4.2.4	Guest Booking (Selecting Dates)	5	5	0	0	100%
4.2.5	Host Booking Management	5	5	0	0	100%
4.2.6	Services Marketplace	6	6	0	0	100%
Total	All Combined Modules	37	37			

Key Findings & Functional Highlights

- Security & Access Control:** The isOwner and authentication middleware components successfully intercepted unauthorized requests. Unauthenticated users were strictly blocked from restricted paths (such as creating listings or booking properties), and regular users were cleanly restricted from accessing the admin dashboard (/admin).

- **Data Validation & Integrity:** The system successfully handled negative test scenarios. Duplicate email registration, missing mandatory inputs, chronologically invalid booking dates, and duplicate phone numbers in the marketplace were all blocked cleanly by backend and client-side validations, returning precise error/flash notifications to the user interface.
- **Core Workflow Automation:** The complex dual-step workflow—where hosts create listings as "Pending Approval," admins vet eco-documents to dynamically override sustainability scores, and guests book disabled overlapping calendar dates—executed precisely as dictated by the system design specifications.
- **Dynamic UI Adjustments:** Real-time price calculations (e.g., automated matrix calculations for multiday bookings) and instant category filtering operated responsively without data leaks or lag.

Chapter 5: Conclusion

5.1 Summary

Nestify successfully demonstrates a modern, community-centric accommodation booking platform that shines a spotlight on budget-friendly, authentic shared living experiences. By empowering local residents to monetize their empty spaces, the platform offers travelers an incredibly affordable way to experience a destination like a true local. With verified shared room options as its core offering—followed closely by unique features for women's safety, specialized guest services, and environmental sustainability—the project comprehensively meets its objectives of creating an affordable, trustworthy, and feature-rich rental application that benefits both locals and travelers.

5.2 Future Enhancements

Payment Integration: Integrate a robust payment gateway (such as Stripe or Razorpay) to securely process real transactions, handle host payouts, and manage refunds directly on the platform.

Map Integration: Add Mapbox or Google Maps APIs to display exact listing locations visually and allow dynamic, radius-based location searching for travelers.

Real-time Chat: Implement WebSocket protocols (like Socket.io) to allow direct, real-time messaging between guests and hosts, facilitating smoother check-ins and better local recommendations.

Identity Verification: Add OTP or link-based email verification during user sign-up using Nodemailer, and potentially integrate a third-party ID verification service for enhanced trust.

7. Appendices

Sample Code:

```
app.js:
require("dotenv").config();
const express = require("express");
const app = express();
const mongoose = require("mongoose");
const path = require("path");
const methodOverride = require("method-override");
const session = require("express-session");
const passport = require("passport");
const ejsMate = require("ejs-mate");
const flash = require("connect-flash");

const Admin = require("./models/admin.js");
const User = require("./models/user.js");
const adminRoutes = require("./routes/admin.js");
const bookingRoutes = require("./routes/bookings.js");
const listingRoutes = require("./routes/listings.js");
const userRoutes = require("./routes/users.js");
const serviceRoutes = require("./routes/services.js");

const sessionOptions = {
  secret: process.env.SESSION_SECRET,
  resave: false,
  saveUninitialized: true,
  cookie: {
    httpOnly: true,
    maxAge: 7 * 24 * 60 * 60 * 1000,
  },
};

app.engine("ejs", ejsMate);
app.set("view engine", "ejs");
app.set("views", path.join(__dirname, "views"));

app.use(methodOverride("_method"));
app.use(express.urlencoded({ extended: true }));
app.use(express.static(path.join(__dirname, "public")));
```

```

app.use(session(sessionOptions));
app.use(flash());
app.use(passport.initialize());
app.use(passport.session());

passport.use(User.createStrategy());
passport.serializeUser(User.serializeUser());
passport.deserializeUser(User.deserializeUser());

app.use(async (req, res, next) => {
  res.locals.currUser = req.user;
  res.locals.currAdmin = null;
  res.locals.flashSuccess = req.flash("success");
  res.locals.flashError = req.flash("error");

  if (req.session.adminId) {
    res.locals.currAdmin = await Admin.findById(req.session.adminId);
  }

  next();
});

const Mongo_URL = process.env.MONGO_URL;

main()
  .then(() => {
    console.log("Database Connected!");
  })
  .catch((err) => {
    console.log("Database Error: " + err);
  });

async function main() {
  await mongoose.connect(Mongo_URL);
}

app.get("/", (req, res) => {
  if (res.locals.currAdmin) {
    return res.redirect("/admin");
  }
}

```

```

    if (req.isAuthenticated()) {
      return res.redirect("/dashboard");
    }

    res.redirect("/signup");
  });

  app.get("/dashboard", (req, res) => {
    if (!req.isAuthenticated()) return res.redirect("/login");
    res.render("dashboard.ejs");
  });

  app.get("/my-listings", (req, res) => {
    res.redirect("/listings/my-listings");
  });

  app.get("/about", (req, res) => {
    res.render("about.ejs");
  });

  app.get("/contact", (req, res) => {
    res.render("contact.ejs");
  });

  app.use("/admin", adminRoutes);
  app.use("/", userRoutes);
  app.use("/", bookingRoutes);
  app.use("/listings", listingRoutes);
  app.use("/services", serviceRoutes);

  // Global error handler — catches any error passed via next(err)
  app.use((err, req, res, next) => {
    console.error(err);
    const message = err.message || "An unexpected error occurred.";
    res.status(err.status || 500).render("error.ejs", { message });
  });

  app.listen(3000, () => {
    console.log("server is listning to port 3000");
  });

```
